

Diamond Chainsaw Sharpeners

Model CSR : Use with a chainsaw grinder

- Fits any chainsaw grinder device or drill that uses a 1/8" shank
- Shaft are made precisely sized, they will not reduce or distort
- Hook angle is constant, improving operation and safety
- Sharpens all cutting teeth including carbides, HSS
- No sparks and will not burn the cutting edge
- Chains will cut longer between sharpening
- Outlasts life of files and stones
- Only light pressure required.

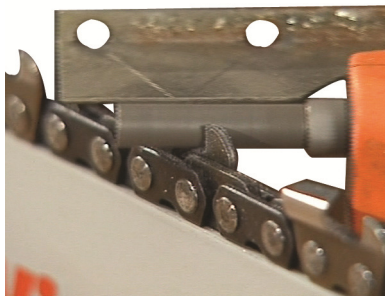

Normal stones are made oversized and then loose shape which distorts the hook angle causing the chain to cut crooked and the bar to wear excessively.

Shaft circumference are precisely sized and will not reduce The hook angle and depth always remains the same on each cutter.

How to use:

Screw or insert shaft into grinder. Determine angle according to guide attached to the chainsaw grinder. Place on tooth and position according to predetermined angle on your guide. Activate grinder for 5-10 seconds, continue this process to all teeth. **Do not** exert pressure through drill let the diamonds do the work.

*No Distortion
No Shatter
No Burning
No Pressure
No Load up
No Bar Wear
No Effort*

Model CSR sizes

5/32" (4.0mm) for 1/4" pitch & 3/8" low profile
3/16" (4.8mm) for .325" pitch
7/32" (5.5mm) for 3/8" & .404" pitch
